This book offers practical and theoretical tools for more effective sustainable design solutions and for communicating sustainable design ideas to today's diverse stakeholders.

It uses Integral Theory to make sense of the many competing ideas in this area and offers a powerful conceptual framework for sustainable designers through the four main perspectives of: Behaviours, Systems, Experiences and Cultures.

It also uses human developmental theory to reframe sustainable design across four levels of complexity present in society: Traditional, Modern, Postmodern, and Integral waves.

Profuse with illustrations and examples, the book offers many conceptual tools including:

- Twelve Principles of Integral Sustainable Design
- Sixteen Prospects of Sustainable Design
- Six Perceptual Shifts for Ecological Design Thinking
- Five Levels of Sustainable Design Aesthetics
- Ten Injunctions for Designing Connections to Nature

Mark DeKay is Associate Professor of Architecture, Chair of Graduate Architecture, and Director of Graduate Studies in the College of Architecture and Design at The University of Tennessee, Knoxville. He is a registered architect and Honorary Fellow of the Institute of Green Professionals.
Construction in the Landscape describes the impact of construction on the land and landscape where it takes place. Geographical coverage is necessarily global to reflect the great variation both in people's economic and social needs and in the shortage or abundance of natural resources.

Solar Home Design Manual for Cool Climates
Shawna Henderson and Don Roscoe
Pb $40.05 $39.95 • 9781844079698 • 208 pages • 2010

Taking you through the process of designing a solar home from the ground up this manual is also a basic course in conservation and sustainable house design. If you live in a 'heating' climate, meaning if you have space heating requirements for most of the year then this is an invaluable resource.
